Subject: Nunez Auto Repair Claim #16599

I represent the adjacent property on First and Bush and am concerned that this closure report shows a plume of potential contamination from this site under our site. There is no assurance that we are indemnified against future regulatory or remediation action when all evidence of contamination come from the Nunez site. This has been a reoccurring concern since the initial identification of leakage in 1983. We believe we have commented at each procedural step of which we have been informed of of our concern; and, desire for an indemnity from an appropriate entity.
